About

Final-year B.E. Computer Science Engineering student with strong foundation in Data Structures, Object-Oriented Programming, and Operating Systems. Proficient in C, Java, and Python with interest in embedded systems and system-level engineering. Familiar with microprocessor fundamentals, Git-based workflows, and SDLC practices.

Education

PSRR College of Engineering, B.E. in Computer Science and Engineering

- GPA: 8.1
- **Relevant Courses:** Data Structures, Algorithms, OS, DBMS, Computer Networks

Projects

Supply Chain Transparency Tracker (MERN + Blockchain) – [Link](#)

- Designed and deployed Ethereum smart contracts to manage immutable product state transitions.
- Implemented backend REST APIs to synchronize on-chain and off-chain data storage.
- Integrated Web3.js with MetaMask for secure transaction signing and asynchronous confirmation handling.
- Ensured data consistency between blockchain and MongoDB using modular architecture principles.

Brain Tumor Classification using CNN-Transformer Hybrid Models (Deep Learning + Gradio) – [Link](#)

- Designed an end-to-end deep learning pipeline for automated brain tumor classification from MRI scans using CNN-Transformer architecture.
- Achieved **96% classification accuracy** on a curated MRI dataset with 3,000+ images after model tuning and augmentation.
- Integrated Grad-CAM visualizations to improve model interpretability and debugging of predictions.
- Built an interactive Gradio web interface enabling real-time inference with average response time under **1.2 seconds**.

FoodConnect – Salesforce-Based Food Donation & Distribution System (Team Project) – [Link](#)

- Designed a Salesforce-based system to manage donors, NGOs, volunteers, and distribution workflows end-to-end.
- Automated task creation and volunteer assignment using Flows and Apex, reducing manual coordination time by **55%**.
- Modeled **10+ custom objects** with Master-Detail and Lookup relationships to track donations and delivery execution.
- Built Lightning dashboards to monitor **100+ donation records** and real-time distribution status.

Technologies

Languages: C, Java, Python, SQL

Frameworks & Tools: MERN, Git, Postman, Remix IDE

Databases: MongoDB, MySQL, Firebase Realtime Database

Core Skills

Data Structures & Algorithms, OOP, Operating Systems (Process & Memory Management), RTOS Basics, Microprocessor Fundamentals, Sensor Interfacing, REST APIs, Git, SDLC

Certifications

- Java Programming – NPTEL, IIT (2024)
- Cloud Computing – NPTEL, IIT (2025)
- Google Cloud Cybersecurity – Google (2025)
- Generative AI in Action – IBM (2025)

Workshops & Training

- Completed IoT Bootcamp conducted by C-DAC with hands-on experience in proximity sensors and industrial PLC controllers.
- Implemented hardware-software interfacing and real-time data monitoring using microcontrollers and PLC systems.
- Gained practical exposure to sensor signal acquisition, digital I/O operations, and industrial automation concepts.
